EDUCATION

Computer Science and Engineering (Bachelor of Technology) July 2018
Manipal University Jaipur **CGPA 9.21**

Computer Science Elective (with PCM) March 2014
Navy Children School (Goa) 10th **9.8 CGPA** - 12th **90.8**

SKILLS

Core Skills	Java (Core Java, Spring, Spring Boot), SQL (PostgreSQL)
Hands-on	JavaScript (Angular), NoSQL (MongoDB), Python (Flask)
Cloud and DevOps	Kubernetes, Docker, Oracle Cloud (OCI)
Tools and Integrations	Kafka, RabbitMQ, Spring Cloud, Maven, Git

WORK EXPERIENCE

Oracle (OCI Logging) *India*

Senior Software Developer *Oct 2022 - Present*

Kafka-Based Real-Time Ingestion and Aggregation (Core Java, Springboot, **Kafka Streams**)

Developed a high-throughput framework **capable of processing 12,000 requests/second (1 billion/day theoretical capacity) with 80 millisecond latency per request** across a 9-node instance pool and 3-node Kafka cluster, including **idempotency checks with 24-hour retention**. The implementation also includes a load-aware custom Kafka partitioner which maintains a **dynamic partition mapping to balance load** and prevent partition hotspots.

Implemented a **Kafka Streams-based aggregation service** supporting time, size, and count-based batching, **reducing database and object storage operations by 90 percentage** and improving downstream processing. Implemented **dead letter queue-based failure handling** for resilient message processing.

Dell *Bengaluru, India*

Senior Software Engineer *July 2018 - Oct 2022*

Quote Deal Planning (Springboot, RabbitMQ)

Developed real-time RabbitMQ-based microservices to **process the high volume of sales records (8k/hour)**. Improved robustness by handling points of failures, and **increased data accuracy and integrity to 98 percent**. Led a team of four members to deliver 5 microservices for large order shipments, **improving system performance by 85 percent within a quarter**. Enabling zero downtime using blue-green deployment. Integrated Service Registry, Config Server, Credhub and made microservices 12-factor compliant.

Workflow Engine (Springboot, PostgreSQL)

Implemented a Free-marker and Quartz based microservice in a span of two sprints leading 2 software engineers from Austin, United States. Developed APIs were integrated with two applications (SNOP workflow, Quote Deal Planning) with more in the pipeline, **saving over $100k per year in expenditure** due to Pega and Flowable licenses.

Material Reservation (Springboot, Angular, RabbitMQ)

Single-handedly developed the core microservice for MR **designed to process $10 million worth of large order quotes** for Dell's strategic customers. The RabbitMQ feeds generated serve as the true source of information for downstream applications (FOE, BOSS, DPE) **reducing order process time by 60 percent**. Worked cross-functionally with engineering teams and **collaborated with business and product leadership** to define product plans and strategy.

Dell *Bengaluru, India*

Software Engineer Intern *Jan 2018 - May 2018*

EOL Audit Automation, Headcount Tracker (Python, Flask)

Designed and developed a Python-based automated task capable of **saving 5,992 man-hours per year** for the DCE Content Operations team. The codebase is deployed as a core application that **saves 5,880 man-hours per year processing EOL requests**. The project was awarded a 10/10 grade point and is actively used in production to date.

NOTABLE ACHIEVEMENTS

- **2 Spot Awards at Oracle** for contributions towards Kubernetes Resource Discovery and Load-Aware Dynamic Partitioner features (June 2025).
- **Dell's Vice President Fiscal Year-End Individual Recognition** by Ramesh Jampula, Vice President and CIO APJ Region, Global Supply Chain Management, Dell (January 2021).
- **3 Bravo awards, 1 Cheer award, 10 Shoutout awards**, and **6 Applause awards** in total, awarded by 3 Principal Software Engineers, 2 Senior Advisors, 2 Managers, and 1 Director at an individual level.
- **Open Market API Contributions**: Generic workflow APIs for code reusability. Employee APIs for quick access to several interlocking applications visioned to be **used by Dell IT space (20+ applications)**. Password reset custom tool for one-tap password reset for multiple microservices **cutting down the effort required for this activity by 90 percent**.
- **3-time Information Technology Development Program Rockstar** for contributions towards ITDP committee (2-year program).
- **Chapter Officer, ACM** (Association for Computing Machinery): **Led over 250 students**, training them for competitive programming and industry-level best practices.
- **Top 5 percent of the batch**: Proven academic track record in Computer Science and Engineering program with 9.21 CGPA.
